Linda Hu

Gilbert, AZ | 480-478-5749 | llh87@cornell.edu | linkedin.com/in/linda-ly-hu

Education

Cornell University — Ithaca, NY

Masters of Engineering; Computer Science; GPA: 4.08 — *Dec 2026*

Bachelors of Science; Computer Science, Minor in Film/Game Design; GPA: 3.99; Magna Cum Laude — *May 2026*

Experience

Databricks — Sunnyvale, CA

Software Engineering Intern — *Jun 2026 – Sept 2026*

- Reduced pipeline config sync runtime 6× using Bazel dependency analysis to sync only changed configs
- Architected and constructed a TypeScript modal in Release Platform that reduced release-management friction for 1500+ release services by centralizing pipeline sync configuration
- Eliminated stale configuration overwrites by implementing timestamp-based concurrency controls
- Integrated pipeline sync observability to monitoring dashboard by implementing alerts and metrics for infrastructure degradation

Amazon — Denver, CO

Software Development Engineering Intern — *Jun 2025 – Aug 2025*

- Cut manual engineering workload 60%+ by automating vendor support tickets with an internal MCP server
- Designed 17 MCP tools and a Claude-powered agentic workflow for tool selection and response generation
- Resolved 65% of tickets autonomously through the resulting agentic workflow, reducing on-call response time

Wells Fargo — Charlotte, NC

Software Engineering Intern — *Jun 2024 – Aug 2024*

- Built a Hadoop-to-Hive SQL pipeline to ingest, transform, and standardize daily risk data across 14 enterprise sources for downstream reporting and analysis
- Collaborated with DevOps to streamline application onboarding, access entitlements, and system integrations

Projects

Metastable Faults in Operating Systems | *Rust, Linux, eBPF, Aya*

- Modeled and induced metastable system failures with memory-intensive Rust workloads under transient overload
- Instrumented Linux block I/O with Aya eBPF to trace kernel-level behavior during persistent degradation

Parallel Monte Carlo Tree Search | *C++, OpenMPI, OpenMP*

- Scaled Monte Carlo Tree Search to 370K games/sec across 128 threads with distributed Zobrist hashing and transposition tables
- Reduced network overhead by batching game-state updates through a dedicated OpenMP/OpenMPI I/O worker

Sharded Key-Value Store | *Java, Paxos, 2PC*

- Built a linearizable, sharded key-value store with atomic multi-key transactions and dynamic load balancing
- Implemented Paxos replication and two-phase commit to maintain consistency across server failures and shard reconfigurations

Visual Attention Image Captioning | *PyTorch, CNNs, LSTMs*

- Reimplemented the Show, Attend and Tell architecture within 2% of its reported image-captioning performance
- Built an LSTM decoder with soft attention over pretrained CNN features and trained it on Flickr8k

Trigger Happy - A Party Game | *C++, P2P Networking*

- Built P2P networking components and serialization structures to synchronize multiplayer game state
- Designed an extensible animation-node system for complex character state transitions

Grammar-Constrained Speech Parsing | *Python, Wav2Vec2, NLTK*

- Built an end-to-end speech parser achieving 92% accuracy on context-free grammar validation
- Improved transcription accuracy 30% by fine-tuning Wav2Vec2 and constraining outputs with phonetic similarity

Technical Skills

Programming Languages: Java, Python, C++, C, Rust, Go, Scala, TypeScript
Frameworks & Technologies: Bazel, Spinnaker, Argo, OpenMPI, OpenMP, eBPF, Aya, React, PyTorch, NLTK
Databases & Systems: Linux, Kubernetes, Hadoop, Hive SQL, MySQL
