EDUCATION

Cornell University, *College of Engineering, Ithaca, NY* **Expected graduation: May 2026**
Bachelor of Science, Major in Computer Science
GPA: 3.903/4.0, Dean's List, Fall 2022 - Spring 2024

Relevant Courses: Object-Oriented Programming and Data Structures; Data Structures and Functional Programming; Intro to Backend Development; Intro to Analysis of Algorithms; Intro to Computer Vision; Data Science for Engineers, Intro to Machine Learning*, Intro to Computer Graphics*, Foundations of Robotics* (**Fall 2024*)

PROJECT EXPERIENCE

Secret Clarkson, Data Structures and Functional Programming **August 2023 - December 2023**
- Collaborated with 3 developers to program a terminal-based social deduction game in OCaml
- Debugged game controller so that player roles are shuffled and updated and game state switches accordingly
- Implemented terminal animation including deletion of confidential information and typing using escape codes and Unix
- Maintained API specification and generated HTML file that documents all public functions created within project

LearnWell, Introduction to Backend Development **September 2023 - December 2023**
- Coordinated with 3 developers to create a tutor-tutee matching Android app using SQLAlchemy and Flask in Python
- Designed and deployed routes using GoogleCloud Compute Engine according to frontend developers' necessities
- Engineered a relational database schema for users, courses, and posts, optimizing inter-table relationships

Cosmic Swing, Introduction to Game Architecture **January 2023 - May 2023**
- Partnered in 8-person teams for a semester to design and code a rotating physics platformer desktop game featured at the Game Design Initiative at Cornell using LibGDX and Box 2D in Java
- Implemented time-based lava hazard with adjustable heights and angles according to specified JSON format and animated sprites that loop according to their state
- Coded player save data implementation to preserve local high scores and level unlock status utilizing Preferences API

WORK EXPERIENCE

Wells Fargo Sophomore Discovery Fellowship **Charlotte, NC**
Technology Analyst *June 2024 - August 2024*
- Shadowed Enterprise Risk Program Reporting tech team in the centralization of FRC, Non FRC, and other SOR data integration through Risk Data Services and Centralized Analytics and Risk Aggregation Tools for reporting
- Engage in agile development of datasets for daily integrated risk reporting through a Hadoop to SQL framework which refines business data from 14 sources and outputs desired information in an SQL database format using Hive
- Integrated frontend and backend for full stack employee-centered app on Web, iOS, and Android that allows for staff to engage in physical activity competitions using React JS, Typescript, CSS, SQL, and Progressive Web App

Combat Robotics @ Cornell **Ithaca, NY**
Marketing Subteam Lead *August 2023 - Present*
- Led subteam of 8 members through 6 hours of weekly meetings by structuring semester timeline and organizing business, outreach, design, media, website development, and video game projects and campus-wide events
- Organized a 2-semester website revamp from vanilla HTML to NodeJS framework while mentoring lower-classmen on GitHub usage, code documentation, and professional coding practices
- Recruited and onboarded 10 new subteam members with 6 2-hour training sessions, training them in team operations
- Coordinated a one-month crowdfunding campaign, securing $9,172 by engaging donors through stewardship emails and managing project progress and outreach materials in social media and engaging graphics

Marketing Member *October 2022 - Present*
- Collaborated with 6 developers to program a Slackbot task tracker that automates reminders to complete tasks based on message reactions and direct messages team lead roster of task completion using Python
- Launched a 2-4 player arcade arena fighter game by modeling robots, testing/scripting attacks that trigger animations, and creating pixel art animations for robot attacks using Unity using C#

SKILLS

Programming: Java; Python; C#; Javascript; Typescript; OCaml; HTML; Tailwind CSS; Flask; SQL
Computer: GitHub; Linux; VS Code; Intellij, Postman; Blender 3D; Unity; Google Suite; Adobe Creative Cloud; Photoshop
